

ANNOUNCEMENT

SHARK TRAP SHUFFLERS APPROVED BY GAMING LABS INTERNATIONAL

Shark Trap™ Gaming & Security Systems has received CERTIFICATION for the first of its ‘Super Shufflers™’ from Gaming Labs International (GLI). GLI successfully conducted all prerequisite tests on Shark Trap’s Novelty-Game Shuffler—essentially identical to Shark Trap’s Poker Shuffler and 1-2 Deck Blackjack Shuffler other than a few minor design/operational features.

One of GLI’s primary objectives is to test and evaluate new gaming products for randomness. Frankly, certification came as no surprise. Since ST shufflers are the first casino shufflers to incorporate ‘true random number technology’ (TRNG) instead of the industry standard, ‘pseudo random number technology’ (PRNG), we were always confident that the shufflers would handily pass GLI’s entire battery of statistical tests. The advantage of a TRNG is that each seed for each random number is generated by physical phenomenon (hardware) that results in true randomness. The seeds for PRNGs are mathematically-generated (software) and are therefore deterministic.

More announcements are forthcoming as we continue our quest to offer Shark Trap’s line of ‘Super Shufflers™’ to an industry that is enthusiastically awaiting for a superior option as compared to current shufflers. Thanks for your patience . . . in terms of productivity, card costs, game protection, and innovation, I promise the wait will be worth it!

Lou DeGregorio, President
